Cosalt Gets A Lift From CoreRFID

Leading marine and offshore safety business Cosalt is to introduce CoreRFID's CheckedOK application to support its rapidly expanding lifting inspection and testing services business. The system is designed to save time, improve reporting accuracy and provide quick access to a complete inspection and maintenance history through a secure database.

Once set up, Cosalt believes that the CheckedOK system will help reduce the risks involved in lifting operations such as loading and unloading, onboard maintenance and engineering or equipment installation.

CoreRFID's CheckedOK system collects data on inspections, prompting engineers with the checks needed for a particular item of equipment. The system works with electronic tags on lifting equipment. The tags trigger the list of tasks in the engineer's hand held computer and ensure that tasks are carried out by staff with the appropriate certifications. CoreRFID are hosting the database that collates data from the handheld computers. The system allows staff to access reports on assigned tasks, view engineer's photographs of damaged or faulty equipment and assigns tasks on the basis of skills and locations.

Cosalt anticipates that the system will save costs in collecting inspection data and improve the services that they provide. The company has a reputation for providing first class lifting products and services to the marine, industrial engineering and manufacturing sectors. Its engineers are all highly trained and accredited by the Lifting Equipment Engineers Association (LEEA) to carry out lifting inspection and audit tasks.

This contract is the latest in a series of wins for CoreRFID in the engineering and construction sector where its solutions are used to improve safety and the management of assets.

About CoreRFID Ltd.

CoreRFID, based in Warrington, UK, is a specialist solution integrator and distributor for RFID applications and technology. CoreRFID develops and implements RFID solutions across construction, healthcare, transport, facilities management, government and high-value manufacturing. The company has delivered applications for asset management, health and safety monitoring, pick and pack manufacturing and plant maintenance.

CoreRFID's has capabilities in RFID technology selection, mobile computing platforms and solution design, development and deployment, working in conjunction with major clients and integrating where necessary with existing back office systems. CoreRFID also operates a web shop outlet and distribution facility.
